

Survey Crafter PROFESSIONAL

The Complete Survey and Analysis Tool

Fast and Easy Survey Design

Survey Crafter Professional makes designing paper, telephone and web-based surveys a snap. It guides you through creating a wide variety of question types, supporting everything from simple multiple choice to open-ended text questions. Survey Crafter Professional even comes with a how-to primer on market research that offers tips and techniques on question phrasing and survey layout.

Publish Your Surveys on the Web

Use Survey Crafter Professional's Web Survey Publish wizard to generate an HTML version of your survey. Upload the HTML files, the Survey Crafter Professional web survey script and a data file to your web server and your survey is ready for your respondents to complete.

New Respondent 1 of 1 - Page 1 of 1

Use the mouse, the enter key, the numeric keypad, and the arrow, spacebar, tab and shift-tab keys to navigate and enter responses to the questions.

Publish Your Analyses on the Web

Use Survey Crafter Professional's Batch Report Designer to generate HTML versions of your analysis tables and charts. You can also have the Batch Report Designer generate Microsoft Excel workbook files.

Variables and the Powerful Expression Language

Survey Crafter Professional uses variables to store responses to survey questions you write as well as to store results of calculations. Use Survey Crafter Professional's Expression Builder to write expressions for computed variables. Computed variables are useful for doing all sorts of things including segmenting your respondent population, weighting responses, converting closed-end to quantity responses, and converting open-end to closed-end responses.

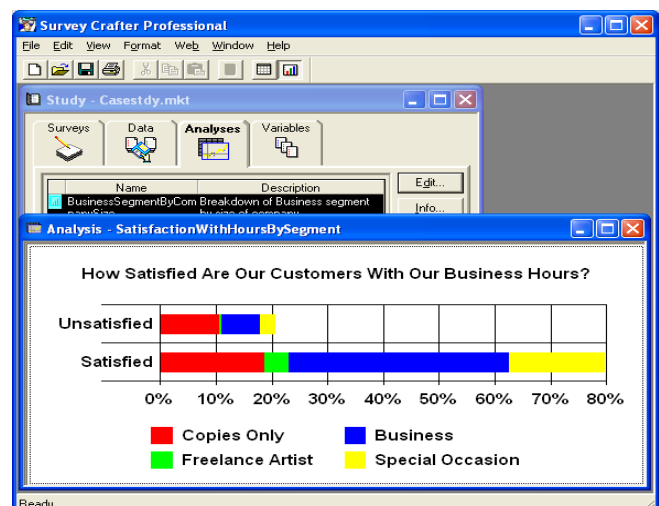

Point and Click Data Management

Survey Crafter Professional painlessly handles everything related to managing your survey data. Use Survey Crafter Professional's built-in Interviewer, an automatically generated data entry form, to enter results live during a telephone survey or from hardcopy responses. Behind the scenes, Survey Crafter Professional checks and verifies your data while building a database that stores it for analysis.

Instant Analysis and Presentation Quality Output

Survey Crafter Professional's built-in wizards help you quickly and easily analyze your survey data, creating cross tabulations, correlation matrices, banners, and custom analyses. These are instantly displayed in professional-quality tables and graphs, with Survey Crafter Professional giving you full formatting control so that you can use them in attention-getting reports and presentations.
